

LEED MR Credit Summary (non-project specific)

At ILI, sustainability is central to what we do. Our commitment to continuous improvement in sustainable operations reduces our company's environmental impact. We take great effort to increase awareness about environmental issues within our industry and help create a more sustainable built environment.

LEED MR Credit 2 – Building Product Disclosure and Optimization – Environmental Product Declarations

At this point, no product category rules are in place for these types of products. ILI is currently performing a life cycle analysis for these products as part of the Living Product Challenge and will publish an EPD as we are able.

LEED MR Credit 3 – Building Product Disclosure and Optimization, Sourcing of Raw Materials

ILI has several aluminum extruder partners. Although each uses pre-consumer and post-consumer content, the content percentage varies by supplier and by profile. ILI can provide specific recycled content information at the time of quote for standard extrusions and at the time of order for custom extrusions. Information is self-reported and is not third party verified at this time.

LEED MR Credit 4 – Building Product Disclosure and Optimization – Material Ingredients

ILI discloses material content to 100ppm through Health Product Declarations (HPDs) which are available to the public in the HPD Collaborative's public repository at <http://www.hpd-collaborative.org/hpd-public-repository/>. We use Valspar's Flouropon Pure formulation for all of our standard and most custom colors, ensuring that our finishes do not contain any Living Building Challenge Red List chemicals. We have published ILFI Declare labels that are available below and at <https://access.living-future.org/declare-products>.

Corporate Responsibility

ILI is among the first manufacturers pursuing the International Living Futures Institute's (ILFI) Living Product Challenge and is the first manufacturer in the United States to earn our JUST Label. Our commitment goes beyond our own operations and providing products for green building projects. We support the efforts of organizations that promote sustainability and environmental awareness throughout the industry. We support the U.S. Green Building Council (USGBC) and the Minnesota chapter of the USGBC, the Health Product Declaration Collaborative (HPDC), and ILFI through sponsorships, leadership roles, and volunteer support. Our LEED-accredited professionals provide training for our staff, sales representatives and throughout the industry.
